AMRA Medical

Medical technology

AMRA Medical is a health informatics company at the forefront of medical imaging and precision medicine. The company has developed a new global standard in body composition analysis, delivering multiple fat and muscle biomarkers with unrivaled accuracy and precision – all from a whole-body MRI scan.

Expertise

Practical implementation of information security in a company handling a large amount of personal data and PHI.

Axentia Technologies

System development

Axentia is a leading company in developing cutting-edge, battery-operated, real-time information display systems for public transport. The low-power iBus displays operate for 5 years on battery, only take 5 minutes to install and require no external wiring.

Expertise

Axentia has broad expertise and manages cybersecurity from microcontrollers to cloud services.

AXENTIA

Brusling Consulting

Consultancy

Consulting firm with a focus on compliance/security, project management and change management.

Expertise

Information security and risk management.

Cendio

IT

Cendio's own developed software ThinLinc helps organizations worldwide to publish Linux desktops and applications. Today, more than 500 organizations worldwide are using ThinLinc in their daily operations, and every day more than 120 000 end users are accessing their Linux desktop with ThinLinc.

Expertise

ThinLinc, which is a software for remote access to Linux desktops, offers several competencies and strengths in cybersecurity. These features are crucial for ensuring the protection of both data and user activities when working remotely or in a centralized IT environment. Here are some of the key security features that ThinLinc provides:

- Encrypted communication
- Authentication and access controls
- Centralized management
- Secure session handling
- Support for security protocols and standards

ContextVision

Industry, medical
technology

Global market leader for providing customized image enhancement software to ultrasound, MRI, and X-ray manufacturers. Specialized in image analysis and artificial intelligence.

Expertise

Cybersecurity standards within the medical technology field.

ContextVision

IT and management consultants

CGI is one of the world's largest consulting firms in IT and business operations, operating in 21 industries and at 400 locations worldwide. We deliver complete, scalable, and sustainable IT and business services that are designed globally and delivered locally.

Expertise

CGI's Strategy Enabled Cybersecurity (SEC) team assists organizations in the field of strategic cybersecurity. We support organizations with systematic security work and the establishment of information security management systems such as ISO 27001/27002 or technical cybersecurity based on frameworks like CIS Controls. We are also experts in EU regulations such as NIS 2, DORA, and GDPR, among others. Combined with our other business areas, which offer a variety of technical IT security solutions, we can deliver a comprehensive portfolio in cybersecurity.

DataExpert Nordic

Cybersecurity

We support companies who make the world safer every day. We do this as a knowledge and technology partner in the field of law enforcement and data security. We support companies with expertise, software, training, support, and consulting in the areas of digital forensics, analytics, OSINT, and cybersecurity.

Expertise

Various software for cyber-threat intelligence and training.

We provide numerous training courses in OSINT and cryptocurrencies, where we also offer various products.

DataExpert 

Dizparc Rationell IT Linköping

IT-company within ERP
and technology

On the Linköping market and its surroundings, there is a competent and experienced team ready to assist your company or organization with simple and rational solutions through their expertise in business systems, enterprise systems, cloud services, and IT security.

Expertise

We believe in making digital security simple and accessible for all businesses, regardless of size, maturity, or budget. Our experienced consultants quickly familiarize themselves with your common everyday challenges, identify necessary actions, and ensure that security becomes a natural element in both your business's digital processes and services. Areas of expertise: Strategic consulting, monitoring services, penetration testing, NIS2.

dizparc

EnlightSec

Cybersecurity consultancy

With our broad range of cybersecurity services, we are always ready to solve complex problems in a rapidly changing world, contributing to a safer society. With our deep knowledge and committed mindset, our ambition isn't to be the biggest company in cybersecurity, but the best.

Expertise

What sets us apart from other companies is not the individual services themselves, but the way we engage in close collaboration with our clients. When you partner with us, you'll have the power to shape and refine everything to your specific needs. It is through this close cooperation that we create comprehensive, tailor-made solutions designed to address your unique IT security challenges. While this approach requires commitment from both parties, the outcome is far superior to standard services. EnlightSec provides a comprehensive range of cybersecurity services:

- IT security assessments
- Cybersecurity as a service
- Incident management
- Training/Education
- DevOps

ENLIGHTSEC

Ericsson

Telecommunication technology equipment vendor

We are a world leader in the rapidly changing environment of communications technology – by providing hardware, software, and services to enable the full value of connectivity.

Expertise

Ericsson is focusing on cybersecurity from a broad perspective including information security, business continuity management, IT security, privacy and product security. The product security includes competencies in several security areas as threat intelligence, regulatory engagements, security SW/HW functionality, security risk assessments, vulnerability analysis, advanced penetration test, vulnerability management and finally the way of working in development and supply flow to ensure security in the product development and the supply of our products.

Front End

Consulting IT

Consultancy support for information security work (e.g., 27001), enterprise architecture work, and requirements engineering.

Expertise

Information security (implementation of 27001/27002)

FRONTEND

Gaia System

Software development
focused on public
transport solutions

We're focusing on products and services for public transportation. Our product, Gaia Public Transport, is a real-time system for central traffic management, passenger information, driver support, and real-time traffic analysis.

Expertise

Distributed cloud to edge solutions.

gaia

HyperCloudz

IT security consultancy

HyperCloudz offers security and consultancy services specializing in IT security and information security.

Expertise

A broad variety of services within the information security space, including IT security architecture, cloud security and governance, risk and compliance.

Hypercloudz AB

link22

Cybersecurity

At link22, we craft cybersecurity solutions that protect the classified data of militaries, government agencies, and corporate clients. With over 20 years of experience, our products are comprehensive, compliant, and user-friendly.

Expertise

Our product portfolio covers the following aspects of digital defense:

Air-Gapped Solutions: We design, implement, and support offline environments, shielding critical systems from external threats.

Eavesdropping Prevention: Our turnkey solutions protect mobile devices from unauthorized listening, preserving confidentiality.

Cross-Domain Solutions: Seamlessly bridge secure communication between sensitive networks.

Hardened Clients: Our off-the-shelf standalone and thin clients are purpose-built to meet stringent government regulations.

link22

Netnod

Digital infrastructure

Netnod provides critical infrastructure support ranging from interconnection services and internet exchanges to time services, DNS services and root server operations.

Expertise

- Running interconnection services and the largest Internet Exchange in the Nordics
- Providing secondary DNS services to partners, enterprises and some of the largest TLDs in the world
- Providing Netnod Time (NTP and PTP) services for Sweden.

Qamcom Research and Technology

Consulting company

Qamcom is a specialist firm focusing on systems, hardware, and software in areas such as: advanced signal processing, industrial AI and IoT, wireless communication systems and system safety. We work with national and international clients, including research projects, product development, and procurement.

Expertise

Risk and vulnerability analyses, embedded systems.

We can manage small and large projects from concept to finished product.

Qamcom is new to the Cybersecurity field, but we can contribute expertise in the adjacent area of system safety.

Saab

Defence and security

Saab is a leading defence and security company with an enduring mission, to help nations keep their people and society safe.

Empowered by its 22,000 talented people, Saab constantly pushes the boundaries of technology to create a safer and more sustainable world.

Saab designs, manufactures and maintains advanced systems in aeronautics, weapons, command and control, sensors and underwater systems.

Saab is headquartered in Sweden. It has major operations all over the world and is part of the domestic defence capability of several nations.

Expertise

To support the goal to keep nations and societies safe, we integrate security in our daily work. Thereby we work in all domains within cybersecurity ranging from awareness, threat and security risk analysis, to GRC, IT security, threat intel, penetration testing and security architecture.

SAAB

Sectra Communications

Industry

Sectra assists defense, other authorities, and various critical societal functions, in Europe and within NATO, to secure their communication against interception and protect their systems against intrusion. By helping customers constantly maintain their availability, we contribute to a safer society.

Expertise

Sectra Communications has been working with cybersecurity for 45 years, specializing in the development of high-security communication systems and advanced encryption. We also have expertise in security monitoring of critical operational systems.

SECTRA

Industry, machine vision

For nearly 40 years, SICK in Linköping has delivered industry-leading solutions in 2D and 3D vision. IVP AB was founded in 1985 by Prof. Robert Forchheimer, and since 2003, it has been part of the SICK Group as its innovation center for Machine Vision, developing sensors and software for image analysis and visualization.

Expertise

Cybersecurity in OT (Operational Technology). Development of resilient products and software.

SICK

Sensor Intelligence.

Sigma Technology Tech House

Consulting company

**Engineering consulting firm
specializing in product development
of electronics and software. Deliveries
through individual consultants, teams,
or full commitments.**

Expertise

Offering expertise in cybersecurity within
the development of smart connected
products (embedded, IoT).

Sylog

Consulting company

Welcome to Sylog – we are specialized consultants in system development, technology, and IT. We are located in Stockholm, Uppsala, Linköping, Gothenburg, and Malmö.

Expertise

We have senior experts in cybersecurity with experience in developing software and systems to meet the highest industry standards.

SYLOG

Tekniska verken

Energy company

In a world full of challenges, where fewer resources need to suffice for more demands and climate change is a reality, Tekniska verken wants to take on greater responsibility. That's why we've decided to build the world's most resource-efficient region.

Expertise

We have a security department with several specialists in cybersecurity (both on the administrative side and technical side).

**Tekniska
verken**

Toyota Material Handling

Manufacturing industry

We offer high-quality trucks that are suitable for all your material handling needs. With over 100 years of combined experience between Toyota and BT, we at Toyota Material Handling are proud to be number one in the world in the production of innovative and high-quality material handling equipment.

Expertise

We have two dedicated resources working with cybersecurity within IT and OT.

TOYOTA

MATERIAL HANDLING

Týr Cyber Defense

Defense-related activities (industry and authorities)

A specialist network in IT and information security with our own staff and subcontractors. We offer senior specialists in security protection, IT, and information security. We operate in the defense industry, with government agencies, and with companies managing critical infrastructure.

Expertise

We have access to some of Sweden's most renowned specialists in the security protection domain and military product safety. In addition, we have a large network of senior specialists and product suppliers in related niche technical areas.

UCS Cyber Security

Consulting and service company

UCS Cyber Security offers customized solutions in IT and information security to protect your organization, whether large or small. We actively work to minimize the risks of cyber attacks. If you've been affected, we can minimize the damage and get your operations back on track.

Expertise

- Consultants in IT and information security
- Cybersecurity as a service (CyberSecurity-as-a-Service/CSaaS)
- Training programs
- IT security assessments
- Expertise in laws, regulations, and standards (ISO 27001, NIS/NIS2, GDPR, etc.)

Cyber Security

Väderstad

Manufacturing

Väderstad AB, headquartered in Väderstad, manufactures agricultural machinery for soil cultivation and seeding. The company's driving ambition is to develop machines that carry out several tasks, at a high work rate, in a single pass.

Expertise

Our competencies in cybersecurity are primarily general, but with a specific focus on manufacturing.

Östgötatrafiken

Public transport

AB Östgötatrafiken is owned by Region Östergötland and is responsible for buses, trams, boats, hovercrafts, and trains in Östergötland County.

Expertise

We can share our experiences from our initiatives in the field of cybersecurity.

Company description coming soon

Cyberly

In our open and connected world, opportunities are endless. Yet, in the face of continuous technology development, so are the vulnerabilities.

We want to embrace continuous change and at the same time enhance everyone's digital resilience to help create a safe, sustainable, and efficient society.

We call our ecosystem Cyberly.

We are a well-connected cluster of members and a vibrant network of stakeholders, where we build trust to share insights and experience with each other and spread the knowledge around digital resilience.

Our approach is ACT Cyberly, which calls for conscious action. Staying ahead and ensuring that securing digital assets and systems are managed along with overall security of an organization and as part of reaching its overall goals.

Our starting point is the region of Östergötland, Sweden, well-known for its industrial and defence heritage, defence and security industry and deep tech startups, scaleups and grownups.

We are one of four clusters in Linköping Science Park – the home of groundbreaking innovations and one of Sweden's largest and oldest science parks. For 40 years, innovations, entrepreneurs, and new companies have started, grown, and developed the world with Linköping as their base.

Our Science Park is a world-class innovation hotspot – with leading tech companies such as Sectra, Actia and Magna, as well as pioneering startups like Epishine, Polar Lights and Nano Textiles. It is a place where businesses grow and break frontiers in close collaboration with academia and talents.
